COTTON SELECTED VARIETIES

Planting time, March and April. One bushel is required to plant one acre. Thoroughly break and prepare the ground early. Rows should be 3½ to 4 feet apart and hills 12 to 14 inches apart in the row. When the cotton comes up it should be off-barred deep while it is small in order to let the heat of the sun strike the beds. As the plants get larger, shallow down and towards the last, cultivate very shallow. Always keep the top crust of the ground broken in dry weather, as it prevents it from losing its form. Never stop plowing for wet weather until the ground turns in slices then quit immediately until it dries off. Never lay by until the middle of August. The first week in April has been found to be the best time for planting cotton.

Note—All of our Cotton Seed is free from Boll Weevil. These are all good varieties which have been thoroughly tested and recommended by Agricultural Colleges and Experiment Stations of the Southern States.

BERMUDA GRASS—Plant from February to September, 20 pounds per acre for lawns and 30 pounds for golf courses and 40 for levee protection. Bermuda is used more extensively than any other grass on lawns, golf courses and levee protection. It has a narrow, thin leaf of dark green color. Spreads quite rapidly and grows very well in the South. It dies down with a heavy frost in the Fall but comes in in the Spring. It does not do well in the shade but is very hardy where it has sunshine. Takes about 30 days to start.
1 lb. 85c; 5 lbs. \$2.35, postpaid.

CARPET GRASS—Plant from February to September, 20 lbs. per acre for lawn and 30 lbs. for golf courses. This is a much coarser grass than Bermuda but will stand drought and hot weather better and also stays green longer in the fall. It is a natural perennial in Louisiana. It is used extensively in lawns, golf courses, fairways and parks. It stands more shade than Bermuda. Takes about 30 days to start. Carpet Grass is also used extensively for meadows and pastures in the South.

DOMESTIC ITALIAN RYE GRASS—Grown in the United States from the imported Italian and English. Used extensively today in America for lawns, golf courses, meadows and pastures and is claimed to be harder than the imported varieties. Slightly darker and stays green longer in the early summer. Requires 300 pounds to the acre on lawns and golf courses and 40 to 50 pounds for pastures.

1 lb. 55c; 5 lbs. \$1.60, postpaid.

CRIMSON CLOVER—Sow in Spring or Fall, 15 pounds to the acre. This variety is most universally grown throughout the country. On fertile soil and especially where hay is desired, it has only one superior, and that is alfalfa.
1 lb. 80c; 5 lbs. \$2.95, postpaid. Write for quantity prices.

WHITE BLOSSOM SWEET (*Melilotus Alba* or *Bokhara*)—Sow 20 pounds per acre from February to April for Spring and September to December for Fall. Resembles Alfalfa in appearance and will grow luxuriantly on soils rich in lime and of insufficient depth for successful growing of either alfalfa or Red Clover.
1 lb. 65c; 5 lbs. \$2.75, postpaid. Write for quantity prices.

WHITE DUTCH—This is a very common variety in the South, although small for hay production, it is one of our best pasture clovers. Sow in Spring or Fall, 12 pounds per acre.
1 lb. \$1.60; 5 lbs. \$7.00, postpaid. Write for quantity prices.

ZOYSIA JAPONICA—This fine-leaved lawn grass will thrive well both in full sun and dense shade. As it only grows from 3 to 4 inches tall it requires very little mowing. The new strain we are offering grows as rapidly as St. Augustine Grass in warm weather, is immune to chinch bugs and has a tendency to crowd out crab grass. Full directions for planting with each purchase.
Lb. \$4.95, postpaid.

LESPEDEZA

LESPEDEZA or JAPAN CLOVER—One of the best clovers that can be planted in the South. Planted at the rate of one bushel to the acre from December to May. If sown on

sod the land should be first scarified with a disk harrow in order to give the seed a good seed bed. Thrives on very poor soils and continually improves them, at the same time yielding a highly profitable and nutritious forage. One bushel to the acre. 25 lbs. to the bushel.
1 lb. \$1.00; 5 lbs. \$4.50, postpaid. Write for prices on larger quantities.

KOREAN LESPEDEZA

KOREAN LESPEDEZA

Korean is the earliest of the annual Lespedezas, coming up first and growing rapidly, therefore giving earliest grazing of any lespedeza. Grows taller than Common, larger plant and coarser, with broader leaflets. Korean matures earlier than other lepedezas, seed beginning to ripen in September. The only variety suitable for Northern half of the United States. Korean is fine in combination with grain for it will drop seed before time to break the ground to sow grain in the fall. Korean is fine in pasture combinations, and an abundant hay yielder.

KOBE LESPEDEZA

Kobe has certainly earned a home for itself on Southern farms, particularly where long periods of drought occurred, for Kobe came through these droughts where Common Lespedeza was burned out. The drought resistance is a life-saver to a farmer, and is no doubt due to the very extensive root system and its rank growth, with larger than ordinary leaves. We have seen Kobe 36 inches tall but usually it is 2 to 2½ feet tall. We have seen yields of 4 tons per acre with Kobe. It is excellent for hay and pasture alike. Can be sown with oats, also with orchard grass and red top or herd's grass.
1 lb. 60c; 5 lbs. \$2.25, postpaid.

WHITE CLOVER

HARDY ALFALFA SEED

ALFALFA

It protects your corn plantings by keeping off crows, larks, blackbirds and other corn-pulling birds, as well as moles, woodchucks, squirrels etc. Does not clog the planter; protects the corn from rotting. Not poisonous and will not injure the seed.

By mail postpaid, 1/2 pint (enough for 1 bushel corn) 70c; pint \$1.15. Not postpaid, 1/2 pint 60c; pint \$1.00.

CROTALARIA SPECTABILIS

World's Best Cover Crop. Build up your soil with this new legume. This new legume produces more humus and more nitrogen per acre than any other crop. It is not a pest and can be easily eradicated and reseeds itself each year under favorable conditions. It is used as a summer cover crop and soil builder in groves, orchards, vineyards, etc. Livestock will not eat it, therefore you will not be tempted to cut it for hay when your ground needs it so badly. This should be planted as soon as danger of frost is past and at a time when there is plenty of moisture in the soil, and can be planted as late as July, either broadcast or drilled. Ten pounds of seed is required per acre for broadcasting and half of that amount if drilled. Grows from 5 to 10 feet depending entirely on the locality.

1 lb. 70c; 5 lbs. \$2.75, postpaid. Write for quantity prices.

STRAWBERRY SHOOKS or DIRT BANDS

STRAWBERRY SHOOKS or DIRT BANDS—Egg plants, muskmelons and early cucumbers pay well if they come early into the market. In order to have them early, it is a good plan to start them in a cold frame in what are called "Dirt Bands." This is a box 4 inches square and 4 inches deep, without bottoms. These are placed in a frame and filled with good rich soil, and five or six seeds in each box. When the plants come up, thin them out to one or two in each box. Before using dirt bands, wet them thoroughly before handling or they will be apt to break at the grooves, as they are made of thin veneered wood. \$2.25 per 100; \$14.00 per 1,000, not prepaid.

ARASAN

Seed treated with Arasan is protected against many seedling diseases and seed decay which cause missing hills and hills with only one stalk. Fifty-one farm demonstrations in the Corn Belt showed that Arasan increased stands by 5% to 15%.

Many poultrymen still like to add Leemulsion to the mash instead of using it in the drinking water. VAPO-SPRAY

Spray in the Air—Treat the Whole Flock

VAPO-SPRAY is a combination of healing oils and expectorants. Both its antiseptic and inhalant properties are valuable. It is sprayed in the air of the poultry house until a light mist is created. The beneficial oils are breathed by the fowls and volatile portions work gently through the air passages.

All forms of bronchitis should receive immediate treatment with both Leemulsion and Vapo-Spray. Prompt action is urgent. Laryngotracheitis should be treated with Vapo-Spray and Leemulsion even if the fowl's have been vaccinated.

ACIDOX

For Coccidiosis

Anyone who has had a serious outbreak of Coccidiosis in his flock knows how bad it is. The "bloody" form of Coccidiosis often causes a very heavy death loss, but other forms that do not show blood in the droppings are just as costly. In bad attacks of Coccidiosis, the lining of the intestines is severely damaged; sometimes so badly that there is bleeding.

Acidox is an acid preparation for chickens and turkeys. Use in any type drinking vessel for the care of birds with Coccidiosis.

PICKPASTE

For Cannibalism

Pickpaste is blood-colored and mixes thoroughly with blood. It is repulsive to fowls. A few tastes of it usually teach birds not to pick at one another unless the habit has been permitted to become firmly established. Pickpaste is greaseless and adheres well to wounds. It is antiseptic and protects the wounds from dirt. It sticks well to skin and feathers but washes readily from the hands. Pickpaste can be obtained in convenient 8-oz. jars for \$1.00, or \$1.15, postpaid.
